I O T   Q U I C K   S T A R T

I am starting my Datatys Project.
1) I create my Datatys project.
2) I add my sensor to the Datatys project.

⚠ *Note: until a sensor is added to a project, the measurements are not associated with said project*

I activate my sensor.
1) I connect the battery.
2) I ensure the data reaches Datatys.

☑ I can see the data:
The sensor is ready
to be installed

☒ Nothing appears on Datatys.
- TiltLog : I disconnect/reconnect the battery.
- NodeLog : I press the reset button.

ⓘ *Once the battery is connected OR the RESET button is pressed, the sensor :*
- *tries to join the network (NodeLog : yellow LED flash)*
  - *> has joined the network   (NodeLog : green LED flash)*
  - *> fails to join the network (NodeLog : red LED flash)*

ⓘ *If after several attemps, nothing appears on Datatys, contact support : **iot-smf@socotec.com***

I prepare the installation : the coverage.
1) I use a public LoraWan network like Orange in France : I check the theoretical coverage on the website *https://www.orange-business.com/fr/reseau-iot*)
2) I use Socotec Monitoring network : I learn about the gateway installation with the dedicated document.

Installation !
1) Deepending on the equipment to be installed, I refer to the procedures
2) I do not leave the site without confirmingthat the data is arriving on Datatys

I finalize the configuration of my Datatys project.
1) I add graphs, dashboards, etc.
2) I start monitoring my project !
